

RHA

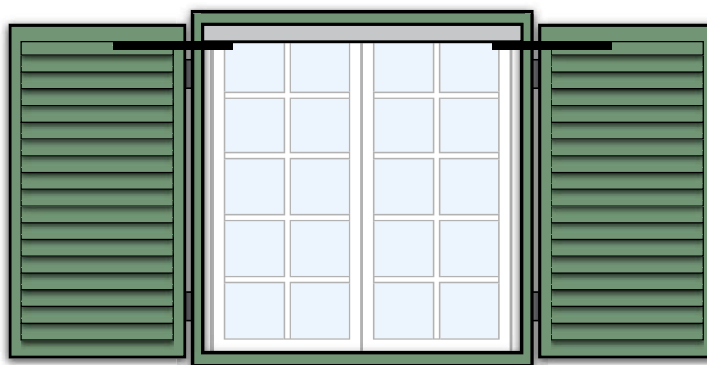

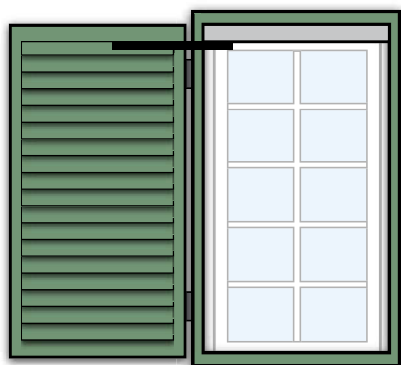

Automation for Hinged door shutters

RHA was the
ancient
Egyptian deity
of the sun

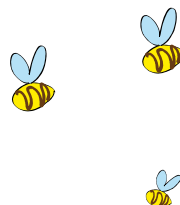

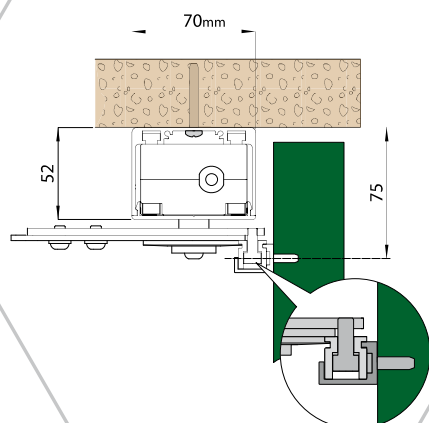

Minimal visual impact, silent and elegant, this is the ideal automation to open and close your slat shutters, thanks to its simple lever system.

RHA allows to easily move those windows that are out of reach. It can be recessed and installed also in existing buildings, and thanks to its compact dimensions it has minimal visual impact. Low voltage gearmotor (12Vdc).

Extremely compact dimensions

"Dead man" function

By pressing the button for more than 2 seconds, you will force the opening/closing movement in any weather condition

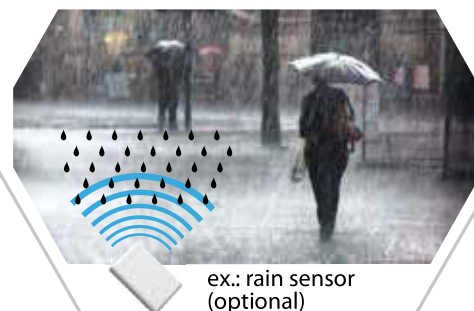

Maximum force in its category

Torque
(output from crankshaft): 35Nm

Centralized opening and closing control (standard)

Its control unit can be easily integrated in home automation systems or with sensors (ex. all shutters close automatically if it rains)

ex.: rain sensor (optional)

Different levers for every type of shutter
